

SEO Audit Report

negasva.shop — 2026-06-23

E-commerce / personalized digital service (custom cartoon-style photo portraits)

Overall SEO Health Score / 100

Executive Summary

negasva.shop has solid technical bones — fully SSR'd Next.js content, strong security headers, fast TTFB, and good schema infrastructure — but several **bugs are actively suppressing the site's own search visibility**: wrong canonical tags on most non-homepage pages, broken hreflang claims pointing to nonexistent locales, and duplicate/competing Product schema entities. None of these require new content or design work — they are metadata bugs with outsized impact, and they are the highest-leverage fixes available.

Content depth is the second-biggest gap: the blog is critically thin (one comparison post measured at ~89 words), and the four style pages appear templated rather than genuinely differentiated, evidenced by identical hardcoded pricing in their schema.

Top 5 Critical Issues

1. Canonical tags on /precios, /order, /galeria, /sobre, /contacto, /faq all point to the homepage instead of self.
2. hreflang tags claim en/fr versions exist; they all resolve to the same Spanish homepage.
3. Competing Product schema entities on style pages, plus generic Product/Offer schema leaking onto non-product pages.
4. /order (checkout) is indexed with no canonical/noindex; /order?style=* variants are crawlable duplicate-content risk.
5. Blog posts are critically thin — the site's own templating proves 500+ word pages are achievable elsewhere.

Top 5 Quick Wins

1. Fix canonical tags to self-reference (hours, high impact).
2. Remove broken en/fr hreflang claims (hours).
3. Redirect www.negasva.shop to apex (minutes).
4. Add llms.txt for AI crawler readiness (1-2 hours).
5. Render all FAQ answers in visible DOM text instead of a collapsed accordion (half day).

Category Scores

Category	Score	Weight
Technical SEO	64/100	22%
Content Quality	55/100	23%
On-Page / Search Experience	63/100	20%
Schema / Structured Data	58/100	10%
Performance (CWV)	73/100	10%
AI Search Readiness (GEO)	64/100	10%
Images	65/100	5%

Supplementary specialist scores (not part of the weighted total): SXO/page-intent fit 62/100, E-commerce signals 64/100, Blog content architecture 42/100, Visual/mobile 68/100. Backlinks: not scored — zero measured footprint in free data sources (domain too new for Common Crawl).

Detailed Findings

Technical SEO — 64/100

Works well: full SSR/SSG (no SPA shell), strong security headers (HSTS preload, full CSP, COOP/CORP), clean robots.txt, valid sitemap, correctly prioritized LCP image loading.

CRITICAL — Canonical tags on /precios, /order, /galeria, /sobre, /contacto, /faq all point to the homepage instead of self. Likely suppressing these pages from search results entirely.

CRITICAL — hreflang tags advertise en/fr/x-default locales that don't exist, all resolving to the Spanish root URL.

HIGH — www.negasva.shop returns 200 instead of redirecting to apex.

HIGH — /seguimiento is noindex,nofollow, blocking link equity unnecessarily.

MEDIUM — Every sitemap URL shares an identical lastmod timestamp (a build-time stamp, not real content tracking).

Content Quality — 55/100

Works well: pricing and 48h turnaround stated clearly and consistently; style detail pages run substantial (~538 words with FAQ).

CRITICAL — The blog is severely thin: a comparison post measured at ~89 words, far below what's needed to rank for comparison-intent queries.

HIGH — The four style pages show signs of templated, copy-paste-and-swap-name content (identical hardcoded pricing across all four in schema).

HIGH — Using third-party trademarked character names as the core keyword strategy carries a business risk worth a deliberate decision.

HIGH — Testimonials aren't linked to a verifiable review platform.

MEDIUM — 2 of 4 styles have zero supporting blog content; no gift-occasion content despite the gift-driven business model.

On-Page / Search Experience — 63/100

/estilos/rick-y-morty is a well-built hybrid product page (price, FAQ, breadcrumbs) that competes well for gift-intent keywords. But for tool-intent keywords like "convertir foto en caricatura simpsons," the SERP is dominated by free instant AI generators (7/10 results) — a paid, 48h hand-drawn product page cannot satisfy that intent.

HIGH — Page-type mismatch for tool-intent keywords; will not rank without a free-preview entry point.

MEDIUM — Missing gift-occasion framing on style pages that competitors use prominently.

MEDIUM — No reviews/ratings visible on style detail pages themselves.

Schema / Structured Data — 58/100

Works well: Product+AggregateOffer and FAQPage JSON-LD present sitewide with clean, citable facts; BreadcrumbList on key pages.

CRITICAL — Competing Product schema entities on the same page (generic + style-specific).

CRITICAL — Generic Product/Offer schema bleeds onto non-product pages (home, /order, /precios index).

HIGH — No Review/AggregateRating schema despite visible testimonials.

HIGH — Identical lowPrice/highPrice hardcoded across all 4 styles' schema.

Performance / Core Web Vitals — 73/100

HIGH — LCP fails the "Good" threshold on all 4 tested pages (2.33s-2.94s), driven by render-blocking CSS and an under-optimized hero image (~41KB savings available).

HIGH — /estilos fails CLS (0.245, "poor") due to a dynamically-rendered grid card shifting layout after load.

MEDIUM — ~11KB wasted on an unnecessary legacy JS polyfill (Array.prototype.at).

MEDIUM — Stripe's checkout JS (236KB) loads globally rather than only on /order.

AI Search Readiness (GEO) — 64/100

Works well: pricing/turnaround stated as clean, repeatable facts; fully SSR'd content directly crawlable by GPTBot/ClaudeBot/PerplexityBot.

HIGH — 9 of 10 FAQ answers are hidden inside a collapsed accordion, invisible to plain-text DOM extraction.

MEDIUM — llms.txt is missing (404).

MEDIUM — No English content despite English search demand for "Rick and Morty portrait"-type queries.

MEDIUM — Weak authority signals (Instagram/TikTok only vs. higher-correlating YouTube/Reddit).

Images — 65/100

MEDIUM — Hero image has ~41KB of unrealized compression savings.

Alt-text coverage and image-SERP visibility weren't deeply audited this pass — recommend a follow-up.

Backlinks

No Moz/Bing/DataForSEO API keys configured. Common Crawl shows zero record of negasva.shop — consistent with a brand-new, small domain not yet captured by quarterly web-graph snapshots. Recommended tactics: Etsy listings, fandom forum/subreddit presence, Pinterest, gift-guide outreach, UGC incentive program.

Action Plan

Phase 1: Critical Fixes — Week 1

- Fix canonical tags on /precios, /order, /galeria, /sobre, /contacto, /faq to self-reference
- Remove broken en/fr hreflang claims (or commit to building real locales)
- Remove competing/duplicate Product schema nodes on style pages
- Scope generic Product/Offer schema off non-product pages
- Add canonical/noindex handling for /order?style=* variants

Phase 2: High-Impact Improvements — Weeks 2-3

- Redirect www.negasva.shop to apex domain
- Remove noindex,nofollow from /seguimiento if unintentional
- Render all FAQ answers in visible DOM text instead of hidden accordion content
- Fix LCP (render-blocking CSS, hero image compression) and /estilos CLS root cause
- Add Review/AggregateRating schema using real, verifiable review data
- Fix hardcoded identical pricing across the 4 style pages' schema

Phase 3: Content & Authority — Month 2

- Expand all 6 blog posts to 800-1500 words, starting with the thinnest comparison post
- Differentiate the 4 style pages beyond name-swapping
- Add llms.txt and consider an English locale for /precios, /faq, /estilos
- Decide deliberately on trademark/IP framing strategy for character-name keywords
- Link visible testimonials to a verifiable review platform

Phase 4: Monitoring & Iteration — Ongoing

- Track Core Web Vitals post-fix via PageSpeed Insights / CrUX
- Build YouTube/Reddit presence for AI-citation authority signals
- Re-run backlink check once domain accrues Common Crawl/Moz coverage
- Monitor whether tool-intent keywords warrant a free-preview entry point
